

Photoluminescent Emergency Lighting For the MRAP Buffalo

AfterGlow, LLC offers an Emergency Egress Photoluminescent (PL) Lighting Kit™ specifically for the MRAP Buffalo. Our objective is to provide the Warfighter with simple and highly reliable emergency markings using our AfterGlow® photoluminescent light sources to identify the locations of door latches and openings, grab bars and emergency equipment such as fire extinguishers in the absence of daylight and any other powered lighting.

When things go really bad and you've got to quickly orient yourself in a darkened vehicle and escape, **clear and reliable safety and egress markings are vital.**

MRAP Buffalo™ Emergency Egress Photoluminescent (PL) Lighting Kit™

AfterGlow, LLC's MRAP Buffalo™ Emergency Egress Photoluminescent (PL) Lighting Kit™ is designed to provide the Warfighter with materials that can be easily installed in the vehicles. The Kit includes adhesive-backed PL tape, magnetic-backed PL tape, PL markings for the fire extinguishers, alcohol wipes to prepare the surfaces and detailed instructions on how and where to install the materials.

Our safety-grade PL materials are inert, waterproof, non-toxic, non-radioactive and can be charged over and over again. A full charge (8+ hours of luminance) on DHI's AfterGlow® Photoluminescent Materials is achieved by exposing the PL material to:

- 3-4 minutes of ultraviolet (black) light, or
- 7-8 minutes of direct sunlight, or
- 21-23 minutes of fluorescent light, or
- 24-26 minutes of incandescent light.

With the exception of the floor, light levels in the buttoned-up MRAP Buffalo during the day are sufficient to keep the PL materials fully charged. Once all light is removed, the fully-charged PL materials will provide adequate light for a minimum of 8 hours of visibility. Once fully-charged, our AfterGlow® brand PL safety materials are readily visible underwater and through smoke.

Photoluminescent Solutions For Other Dept. of Defense Applications

Our AfterGlow® Photoluminescent Safety Products are gaining wide success within the U.S. Department of Defense. In November 2004, we began using our PL safety products for a \$6.5 M Federal contract to install revolutionary PL Low Location Exit Path Marking Systems (LLEPMS) in the Pentagon. Our state-of-the-art PL solution provides Pentagon military and civilian personnel with no-fail emergency signage, enabling them to locate building exits even under extreme adverse conditions such as the total loss of electrical power or severely reduced visibility due to heavy smoke.

Aircraft propellers are dangerous to anyone who approaches them on the ground. Spinning so fast that they're practically invisible, propellers are especially dangerous when light is low or visibility is limited. It's tragically easy to be distracted amid the noise and stress of flight operations, and people are struck and killed every year. We have addressed this problem by applying an innovative AfterGlo® PL safety paint onto propeller blades, creating a highly effective visual warning indicator: now the crew can see the propellers. This solution (patent pending) can also be used on helicopters and a wide array of civilian aircraft.

Our AfterGlow® safety signage is also being applied to some of the Navy's newest ships where tests have shown that our PL signs are five times brighter and glow five times longer than conventional Navy signage.
